

SAY YES TO SOLAR POWER

Solar panels are to be encouraged on Enfield Island Village. At a meeting on 18 July 2011, Enfield Island Village Trust directors decided that PV solar panels and solar thermal systems installed on the roofs on Enfield Island Village should be encouraged. No action under the restrictive covenants would be taken against households installing them so long as, for solar panels, the installer is accredited under the Microgeneration Certification Scheme or, for solar thermal systems, they are installed by a CEN Solar Keymark Scheme accredited installer. This mainly affects freeholders. For communal flat proposals you should contact Amber Management.
